

Reinforced Food Grade Tank Liner - Hydrashield 1000

All our tank liners are made in our own Rhino Tanks manufacturing factory and have been for over 20 years. Our qualified liner fabricators use the latest welding techniques and state of the art machinery to produce liners of the highest quality.

Hydrashield 1000 is the latest technological advancement in liner fabrics on the world market and is exclusive to Rhino Water Tanks. Hydrashield 1000 has a state of the art food grade, UV treated, multi layered film called Metallocene, laminated to the existing reinforced polyethylene liner giving extra layers of strength and durability. This gives Hydrashield 1000 a service life of over 60 years.

The development of this new commercial strength liner once again demonstrates Rhino's commitment to consistently improve our product and reinforces our status as one of the world's leading manufacturers of tank liners.

Hydrashield 1000 has passed water potable testing at the Australian Water Quality Centre

AS/NZS 4020:4020 and ANSI/NSF - 61 and has been tested for:

- a) Taste of water extract
- b) Appearance of water extract
- c) Growth of aquatic organisms
- d) Cytotoxic activity water extract
- e) Mutagenic activity water extract

Our superior Hydrashield 1000 reinforced tank liners are fabricated by Rhino's highly qualified liner fabricators using the latest welding techniques and machinery.

The sections of liner are joined using a heat welding process with a 50mm overlap.

The Metallocene tape welded seam provides an extra seal and prevents bacterial growth under the lap seam.
